

MAXIMIZE VEHICLE **UPTIME** — IN A GLANCE.

INSIGHT TO YOUR ENTIRE FLEET

All Makes, All Models, All Components

Why only monitor your engine when other electronic components can threaten your vehicle's uptime? TripVision monitors on all of your heavy-duty vehicles and calculates health and safety scores based on the faults on all components.

Health Scores

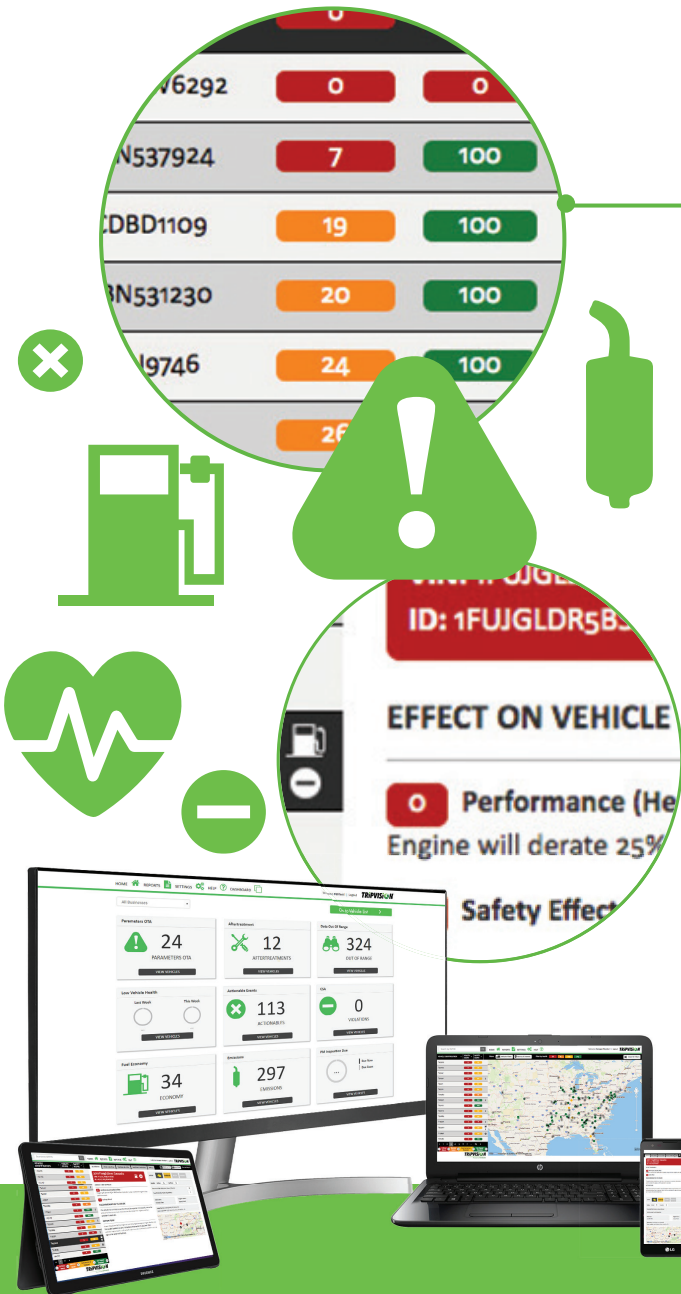

Aggregated scores, color-coded based on severity, provide a snapshot of the each vehicle's health status. Each score has an associated effect-on-vehicle description and a recommended action for managing that vehicle to maximize uptime.

Safety Scores

Does one of your vehicles have a faulty windshield wiper motor? Issues like this won't shut down the engine, but can sideline your vehicle in a rainstorm.

SAVE MONEY WITH EARLY DETECTION & ACTION

- Know which vehicles have faults affecting their fuel efficiency.
- See vehicles with faults that could lead to CSA violations.
- Quickly learn which issues are affecting emissions systems.
- Receive actionable alerts to notify you of issues that can be resolved without a trip to the shop or mobile repair call.
- Stay informed to issues with as DEF levels, battery voltage and more with TripVision's Data Monitor.
- Remotely clear faults, force a DPF regen, perform an ACM reset, modify max road and cruise speeds — from anywhere with internet connection and the **NEW ND2** device.
